

# BELZONA HELPS PROTECT OFFSHORE PLATFORM LEGS AT WATERLINE

ID: 1591

## PROBLEM

Due to corrosion and impact damage platform legs were at risk of losing structural integrity. Client wanted to terminate damage to avoid further deterioration. Customer had welded top and sides of halfwrap without welding bottom, due to water/wave action. Corrosion had actually accelerated between the leg and halfwrap.

## APPLICATION SITUATION

Platform legs damaged by corrosion and impact from service/crew boats at the waterline.

## APPLICATION METHOD

Application was carried out in accordance with modified Belzona Know-How System Leaflet SOS-8. Belzona 1161 was used to seal the bottom of split shells, and Belzona 5831 was then injected to fill cavity between platform leg and steel wrap.

## BELZONA FACTS

Customer came to local Belzona Distributor for solution. Belzona surface tolerant materials allowed area to be completely sealed. Thus the possibility of corrosion was eliminated. Customer has completed 32 leg repairs and scheduled more for the next few years.

## INDUSTRY

Oil & Gas

## LOCATION

Major Oil & Gas Producer, Gulf of Mexico

## APPLICATION DATE

May, 2010

## PRODUCTS

Belzona 1161 (Super UW Metal)  
Belzona 5831 (ST Barrier)

## SUBSTRATE

Carbon Steel
