

EXPANSION JOINT REPAIR

ID: 9965

PROBLEM

The expansion joint exhibited advanced deterioration, resulting in loss of movement accommodation and ineffective water sealing. This condition increased the risk of progressive substrate degradation and contributed to vehicle impact damage, including premature tire and suspension wear.

APPLICATION SITUATION

The Belzona system allowed in-situ repair without shutdown, avoiding production losses and costly traffic rerouting.

Rapid curing enabled a quick return to service, minimising disruption and labour costs.

Its long-term durability reduces future maintenance, protecting both the substrate and vehicles, delivering significant lifetime savings.

APPLICATION METHOD

The application was carried out in accordance with FPA-5 and FPA-6.

BELZONA FACTS

The Belzona system provided an in-situ repair without shutdown, avoiding production losses and costly joint replacement.

Traditional sealants or full replacement would have required long downtime, high costs, and frequent rework.

Belzona's fast-curing, flexible, and durable solution restored performance quickly while ensuring long-term protection.
